

MULTI-POLE ELECTRICAL CONNECTORAbstract

5       A multi-pole electrical connector is provided with a plurality of electrical busses each arranged to receive a plurality of conductors. The busses are each provided with a plurality of conductor wells to receive and grasp an electrical conductor inserted therein. The opposing walls of the buss are spring loaded to grasp the conductor and a plurality of locking tabs are formed in the individual conductor wells for contacting and grasping the 10 conductor to prevent its inadvertent withdrawal from the well.
